Barcode/RFID user identification card

TSWA can provide the bar coded identification cards to suit your personnel identification needs.

Identification cards can be customized with your company logos or other custom artwork in black and white or full color.

Bar codes can be serialized in any bar code format you specify.

Bar coded Identification cards can be a permanent solution to identify regular customers, forklift operators, or other employees that need to be authenticated to interface with your operation.

Bar coded cards can also be provided that include an embed **RFID** (Radio Frequency Identification) tag to allow the user to identify himself automatically without having to present the card each time. This is very useful for high traffic areas, or area where bar codes alone are not practical. **RFID** tag type, antenna specifications and power output will determine read speed and range of view.

These durable cards are the perfect way to accurately track and manage the flow of information generated by your employees and customers.
